WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY

International application No. PCT/GB2004/004289

	Box No	o. I Basis of the opinion		
1.	With re	gard to the language, this opinion has been established on the basis of the international application in guage in which it was filed, unless otherwise indicated under this item.		
	lar (uı	is opinion has been established on the basis of a translation from the original language into the following aguage—, which is the language of a translation furnished for the purposes of international search and results and 23.1(b)).		
2.	With regard to any nucleotide and/or amino acid sequence disclosed in the international application necessary to the claimed invention, this opinion has been established on the basis of:			
	a. type	of material:		
		a sequence listing		
		table(s) related to the sequence listing		
	b. form	nat of material:		
		in written format		
		in computer readable form		
	c. time	e of filing/furnishing:		
		contained in the international application as filed.		
		filed together with the international application in computer readable form.		
		furnished subsequently to this Authority for the purposes of search.		
3	h	n addition. in the case that more than one version or copy of a sequence listing and/or table relating thereto as been filed or furnished, the required statements that the information in the subsequent or additional opies is identical to that in the application as filed or does not go beyond the application as filed, as appropriate, were furnished.		

4. Additional comments:

The following defects in the form or contents of the international application have been noted: see separate sheet

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

PCT/GB2004/004289

Re Item V

Reasoned statement with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement

Reference is made to the following documents:

D1: US-A-5 086 843 D2: WO 00/57020 A

D3: US-B1-6 467 547

The document D1 is regarded as being the closest prior art to the subject-matter of claim 1, and shows (the references in parentheses applying to this document) a downhole releasable coupling, the coupling comprising a first substantially tubular member (10) having a bore therethrough, one or more raised portions arranged circumferentially on the outer surface, the raised portions defining a first face surrounding the member and substantially perpendicular to the outer surface; and a second tubular member (14) having a bore therethrough, one or more raised portions (38) arranged circumferentially on an outer surface thereof, the raised portions defining a second face (42) surrounding the member and substantially perpendicular to the outer surface, the second face (42) being at an end of the member; wherein the first tubular member (10) slides within the second tubular member (14), and the first and second raised portions can meet to thereby transfer torque when a member is rotated.

The subject-matter of claim 1 differs from this known coupling in that:

- first and second screw threads are provided in the first and second members,
- the raised portions in the first and the second tubular members have a plurality of projections, each projection having a substantially straight portion arranged parallel to the bore and a sloping portion, joining an apex of the projection to a base of an adjacent projection, and
- the first and second screw threads mate and on part engagement of the screw threads, the first and second straight portions can meet to thereby transfer torque when a member is rotated in the direction of the screw threads.

The subject-matter of claim 1 is therefore new (Article 33(2) PCT).

WRITTEN OPINION OF THE INTERNATIONAL SEARCHING AUTHORITY (SEPARATE SHEET)

PCT/GB2004/004289

The problem to be solved by the present invention is the application of excessive torque to a threaded coupling it is desired to loosen later. When reverse torque is applied, it is not certain that the joint of the coupling is released, and not some other joint along the string. This problem is solved by the features differentiating claim 1 from the prior art by providing projections that meet on part engagement of the threads, so that the amount of torque applied to that particular joint is limited, thus ensuring a safe release when torque is reversed.

Document D2 discloses a joint for tubular members with twist limiters (35, 85), although the threads are discontinuous in order to allow insertion of the pin into the box, and the purpose is to secure a desired relative position of the end of a conductor cable (66). In document D3, a torque dampening system is included in a coupling to dampen the overtravel of a liner upon its breaking free from an obstruction (see column 1, lines 49 to 64). However, none of these documents hints at the solution provided by the present invention to the objective problem explained above, and therefore claim 1 of the present application is considered as involving an inventive step (Article 33(3) PCT).

Claims 2 to 19 are dependent on claim 1 and as such also meets the requirements of the PCT with respect to novelty and inventive step. The same reasoning applies, mutatis mutandis, to the subject-matter of the corresponding independent claim 20 and its dependent claims 21 to 26, which therefore are also considered new and.

Re Item VII

Certain defects in the international application (form or content)

Contrary to the requirements of Rule 5.1(a)(ii) PCT, the relevant background art disclosed in the documents D1, D2 and D3 is not mentioned in the description, nor are these documents identified therein.

The features of the claims are not provided with reference signs placed in parentheses (Rule 6.2(b) PCT).
